Introduction

A copy of this manual is provided with every crane and can be found in the hard plastic manual case that is installed on the chassis. A copy of this manual shall remain with the crane at all times.

Throughout the manual, three signal words will be used to bring attention to important items:

NOTICEA NOTICE signal word indicates a practice not related to physical injury.

AWARNING

A WARNING signal word indicates a hazardous situation which, if not avoided, could result in death or serious injury.

▲ DANGER

A DANGER signal word indicates a hazardous situation which, if not avoided, will result in death or serious injury.

Information contained within this manual does not cover operation, maintenance, or troubleshooting. Please refer to the General Light Duty Crane Manual for details on these items.

This manual is not binding. Stellar Industries, Inc. reserves the right to change, at any time, any or all of the items, components, and parts deemed necessary for product improvement or commercial/production purposes. This right is kept with no requirement or obligation for immediate mandatory updating of this manual.

In closing:

If more information is required or technical assistance is needed, or if you feel that any part of this manual is unclear or incorrect, please contact the Stellar Customer Service Department by phone at 800-321-3741 or email at service@stellarindustries.com.

For Technical Questions, Information, Parts, or Warranty, Call Toll-Free at 800-321-3741

Hours: Monday - Friday, 8:00 a.m. - 5:00 p.m. CST

Chapter 1 - Specifications

Model 14528 Specifications

Crane Rating: 82,600 ft-lbs (11.42 TM)

Standard Boom Length: 13' (3.96 m) from CL of crane

Boom Extension: 1st stage: Hydraulic 90" (228.6 cm)

2nd stage: Hydraulic 90" (228.6 cm)

Maximum Horizontal Reach: 28' (8.53 m) from CL of crane

Maximum Vertical Lift: 29' 4" (8.94 m) from crane base

Boom Elevation: -5 to +80 degrees

Stowed Height: 43" (102.9 cm)

(crane only)

Mounting Space Required: 25" x 22" (63.5 x 55.9 cm)

Approximate Crane Weight: 3100 lbs (1406 kg)

Controls: Radio control standard for all functions.

Winch Specifications

Rope Diameter: 1/2" (1.27 cm)

Line pull speed: 60 ft/min (18.29 m/min)
Max. single part line: 7000 lbs (3175 kg)
Max. double part line: 14,000 lbs (46,350 kg)

Rotation: 400 degree power

(worm gear)

Lifting Capacities: 14,000 lbs @ 5' (6350 kg @ 1.52 m)**

2950 lbs @ 28' (1335 kg @ 8.54 m)**

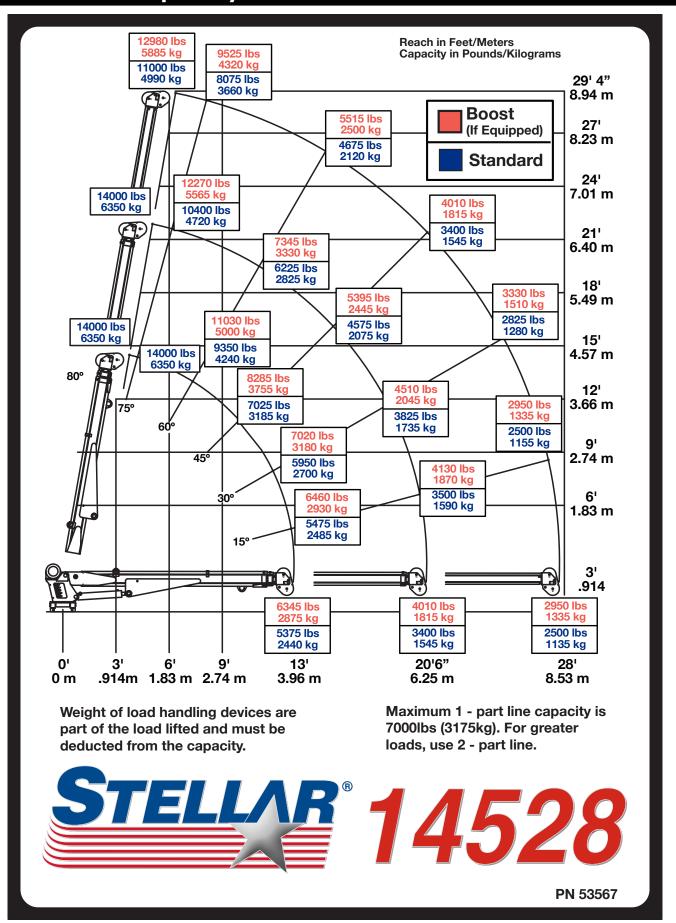

Power Supply Required: PTO & Pump

(12 gpm @ 2600 psi) (45.4 lpm @ 180 bar)

^{*}Crane rating in Boost Mode. Normal crane rating is 70,000 ft-lbs (9.68 ton-m).

^{**}Maximum capacities in Boost Mode

Capacity Chart - Decal PN 53567

Chapter 2 - Installation

General Installation

This chapter is designed to serve as a general guide for the installation of a Stellar 14528 Crane on a Stellar Service Body. Each installation is considered unique so certain portions of this chapter may or may not apply to your direct application. If a question should arise during the installation process, please contact Stellar Customer Service at (800) 321 3741.

This crane is designed for use with a Stellar Service Body installed on a vehicle that meets the minimum chassis requirements of the crane. It is the installer's responsibility to assure that the crane is mounted on a platform that will support the maximum crane rating of this crane.

AWARNINGDo not install this crane on a body not capable of handling the loads imposed on it. Failure to do so may result in serious injury or death.

NOTICE When installing welder units to the service bodies, it is highly recommended that a surge protector is installed on the chassis batteries to protect the crane radio receiver, wiring and other electronic devices from an unexpected electrical spike or surge. Failure to do so could result in extensive damage to the service body and crane electrical circuit.

Installer Notice

According to Federal Law (49 cfr part 571), each final-stage manufacturer shall complete the vehicle in such a manner that it conforms to the standards in effect on the date of manufacture of the incomplete vehicle, the date of final completion, or a date between those two dates. This requirement shall, however, be superseded by any conflicting provisions of a standard that applies by its terms to vehicles manufactured in two or more stages.

Therefore, the installer of Stellar® Cranes and Bodies is considered one of the manufacturers of the vehicle. As such a manufacturer, the installer is responsible for compliance with all applicable federal and state regulations. They are required to certify that the vehicle is in compliance with the Federal Motor Vehicle Safety Standards and other regulations issued under the National Traffic and Motor Vehicle Safety Act.

Please reference the Code of Federal Regulations, title 49 - Transportation, Volume 5 (400-999), for further information, or visit http://www.gpoaccess.gov/nara/index.html for the full text of Code of Federal Regulations.

Torque Data Chart

When using the torque data in the chart, the following rules should be observed:

- Bolt manufacturer's particular specifications should be consulted when provided.
- Flat washers of equal strength must be used.
- All torque measurements are given in foot-pounds. To convert to inch-pounds, multiply by 12.
- Torque values specified are for bolts with residual oils or no special lubricants applied. If special lubricants of high stress ability, such as Never-Seez compound graphite and oil, molybdenum

		GRA	DE 5	GRA	DE 8	GRADE 9

1 3/8-6	1.3750	1470	1100	2380	1780	2158	
1 1/2-6	1.500	1950	1460	3160	2370	2865	

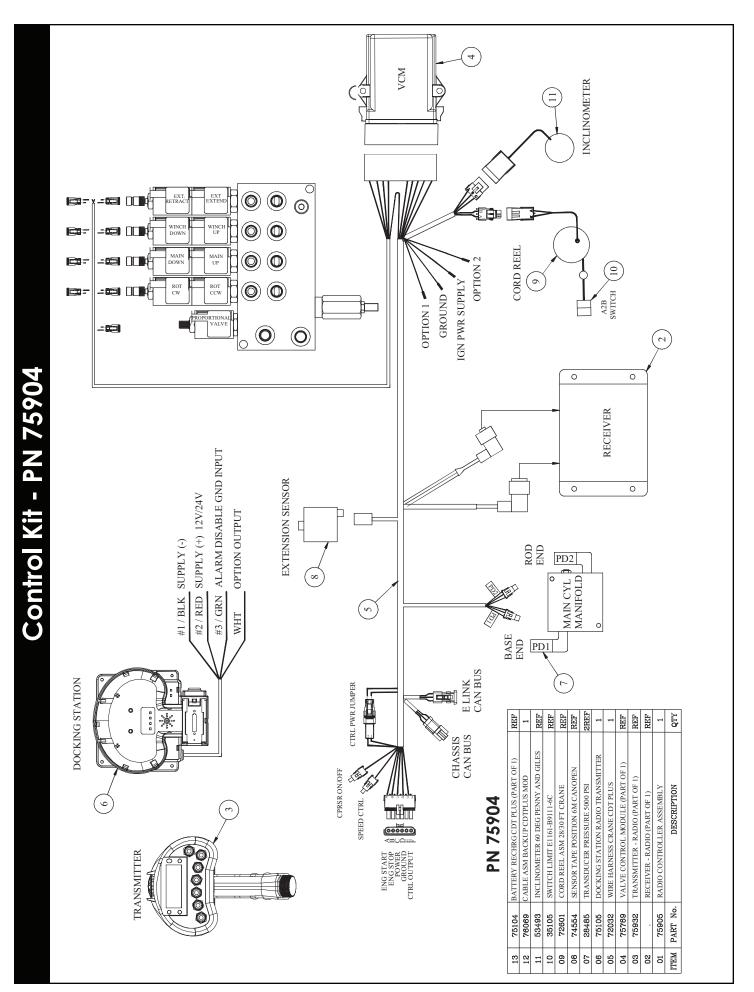

disulphite, colloidal copper or white lead are applied, multiply the torque values in the charts by the factor .90. The use of Loctite does not affect the torque values listed above.

- Torque values for socket-head capscrews are the same as for Grade 8 capscrews.
- Do not use these values if a different torque value or tightening procedure is given for a specific application. Torque values listed are for general use only. Check tightness of fasteners periodically.
- Shear bolts are designed to fail under predetermined loads. Always replace shear bolts with identical grade.
- Fasteners should be replaced with the same or higher grade. If higher grade fasteners are used, these should only be tightened to the strength of the original.
- Tighten plastic insert or crimped steel-type lock nuts to approximately 110 percent of the dry torque values shown in the chart below, applied to the nut, not to the bolt head. Tighten toothed or serrated-type lock nuts to the full torque value. Note: "Lubricated" means coated with a lubricant such as engine oil, or fasteners with phosphate and oil coatings. "Dry" means plain or zinc plated without lubrication. Tighten lubricated bolts to approximately 80% of dry bolts.

Installation Overview

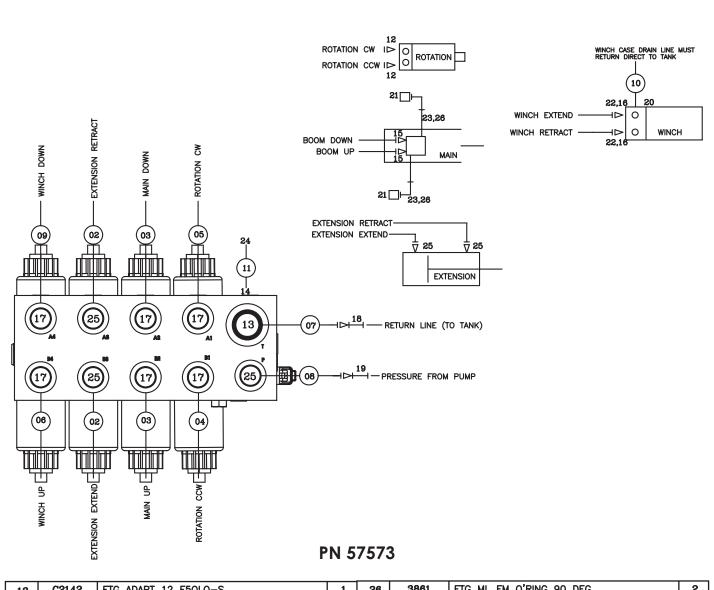

- 1. Determine that the mounting location for the 14528 crane is at least 25" x 22" (63.5 x 55.9 cm).
- 2. Use the detail below to drill 1.31" diameter holes into the mounting plate. Run tap on the threads of the base to be sure they are clean.
- 3. Use a crane or lifting device capable of lifting the weight of the Stellar® Crane. The Stellar 14528 weighs approximately 3100 lbs (1406 kg). Note: cranes are shipped with rotation positioned at 200 degrees of 400 degree system. This will allow for easy installation of the crane and permanent connection of all hydraulic and electrical components prior to repositioning into the crane saddle.
- 4. Connect straps or chain from the lifting device to the lifting rings on the 14528.
- 5. Use eight (8) 3.5" x 1.25" #8 bolts and eight (8) #8 flat washers.
- 6. Install a washer on each bolt.
- 7. Apply Loctite Thread locker #277 to the bolts.
- 8. Using the lifting device, lower the 14528 just above the crane compartment and start the bolts. Have someone assist in leveling the crane. Note: the rotation motor should be to the door side of crane compartment and the boom should be extended back over the rear bumper.
- 9. Secure the crane using the mounting hardware provided (see the detail below). **Note:** longer or shorter cap screws may be required – recommended thread engagement into crane base is 1.75" – use grade 8, zinc plated cap screws only.
- 10. Torque the cap screws to 1360 ft-lbs.
- 11. Remove supporting crane.
- 12. Hook-up hydraulics and electrical using the schematics provided in this chapter.

5	61063	VALVE OPEN 14528 D03	1
6	61064	COIL VALVE 14528 D03	8

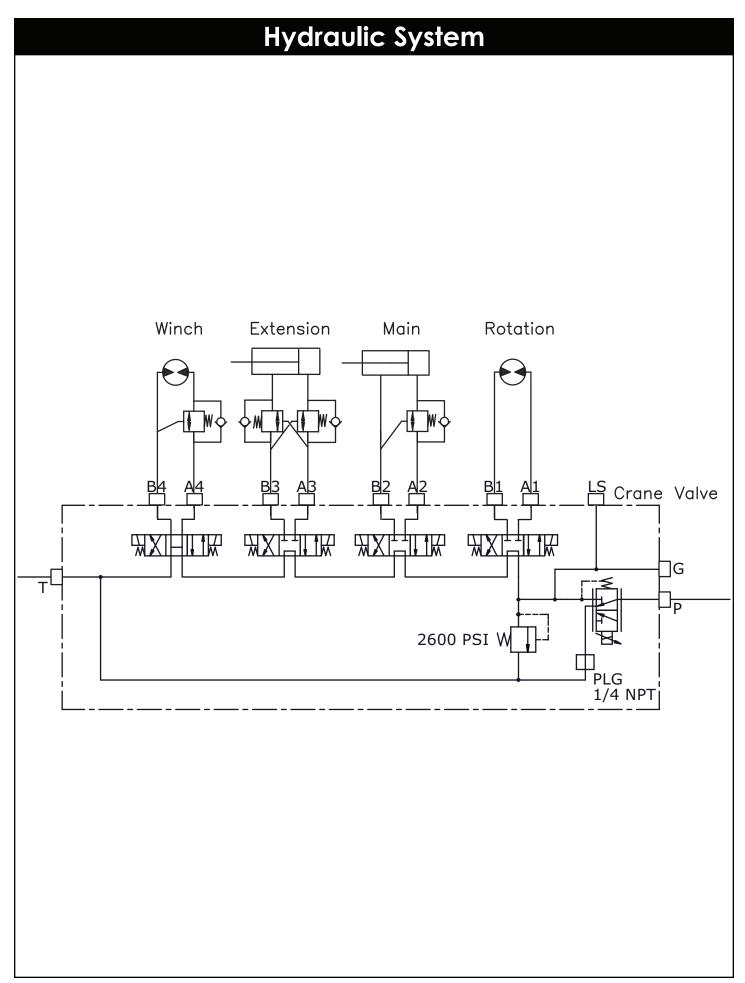

Hydraulic Installation 1. After mounting, locate the pressure and return lines. Note: Pressure line is 1/2" hose; Winch Case Drain Line is 3/8" hose; Return line is 3/4" hose; Optional Load Sense Line is 1/4" hose. Hoses are terminated using swivel fittings. 2. Install hydraulic lines per diagram below. See next page for Case Drain Installation. Note: Stabilizer valve supplies oil to crane using the Power Beyond feature. 3. Install hydraulic reservoir with return filter. Attach pump pressure line to valve, return link to tank. 4. Fill system with hydraulic oil (See Stellar® Lubrication Recommendations for fluid details). Winch Case Drain (Blue) **Optional Load Sense** 1/4" Line 3/8" Line Route Thru Return Filter Return Pressure -3/4" Line 1/2" Line Tank Return -Stabilizer Functions Power Beyond -Pump Pressure **Stabilizer Functions** Typical Stabilizer Valve with Power Beyond Capabilities

Winch Case Drain Installation

Installing the winch case drain

- 1. The winch case drain must run directly to the reservoir to ensure no back pressure in the line.
- 2. Use 3/8" hydraulic hose and fittings rated for a minimum of 300 psi.
- **3.** Locate the winch case drain line at the bottom of the crane base as shown in Fig. 1 (Blue Hose). Note: Both the main pressure and winch case drane line use a 3/8" swivel fitting. Verify the winch case drain is attached to the hose that is connected to the winch motor.
- **4.** Attach one end of the winch case drain to 3/8 swivel fitting located in step 3.
- **5.** Route the winch case drain hose directly to the reservoir.
- **6.** Connect the second end of the winch case drain to unshared fitting on the top of the reservoir as shown in Fig 2.

Stability Procedure

Definition of Stability for the Stellar Telescopic Crane Products:

A truck is stable until the load cannot be lifted off the ground with the winch, without tipping over the truck. Every Stellar crane installed must be tested for stability to determine the actual load capacity of the final truck package. The actual test data must be recorded and supplied with the truck at the time of in-service and should be kept with the truck at all times. The following procedure will test the truck package for stability and will provide a stability capacity chart. The load limit information shown on the stability capacity chart is formulated on 85% tipping.

Set Up:

- 1. Locate the truck on a test course in position for loading and engage travel brakes.
- 2. Set stabilizers so that they make contact with firm, level footing.
- 3. Operate the crane under partial load to assure operator proficiency and proper machine function.
- 4. Put the radio into Stability Test Mode:
 - A. Push the bottom four switches up and hold until all lights come on (approximately 5 seconds.)

- B. At this point, the crane will have enough capacity to handle the weight for the stability test.
- C. The radio will timeout of stability mode after 30 minutes or when the E-Stop button is pushed.

Note: The radio can only be put into stability mode five times. After that, the radio would have to be returned to Stellar to be reprogrammed to allow additional stability testing. All other radio functions will work properly even if stability mode is not available.

Stability Procedure Continued...

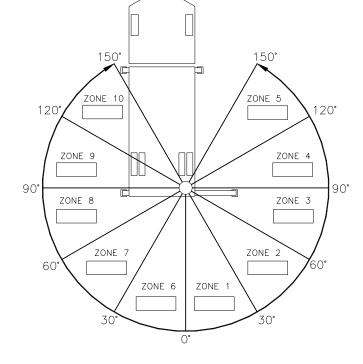

14528 Stability Data

Max Horizontal Reach: 342" (From the center of rotation to boom tip)

Boost Stability Test Weight: 3,480 lbs.
Non-Boost Stability Test Weight: 2,950 lbs.

Test Procedure

- 1. Rotate the crane into Zone 1 position.
- 2. With the crane fully retracted and the boom horizontal, winch the test weight off the ground. Note: Keep weight within six inches of the ground at all times.
- Extend the boom outward until full extension has been reached or until the truck becomes unstable (Again, use the winch to keep the weight within six inches of the ground.)
- 4. If the boom goes full extension without becoming unstable, the crane is termed stable for this zone and 100% can be written in the Zone 1 data box.
- If the truck becomes unstable prior to going full extension, retract the boom until the truck becomes stable and measure

the horizontal reach in this position (center of rotation to boom tip). This is the stable horizontal reach for this zone. Stable horizontal reach divided by Maximum horizontal reach multiplied by 100 equals the percentage of rated capacity for this zone. Use the following formula to determine the percentage of rated capacity:

Stable Horizontal Reach

x 100 = Percentage of Rated Capacity

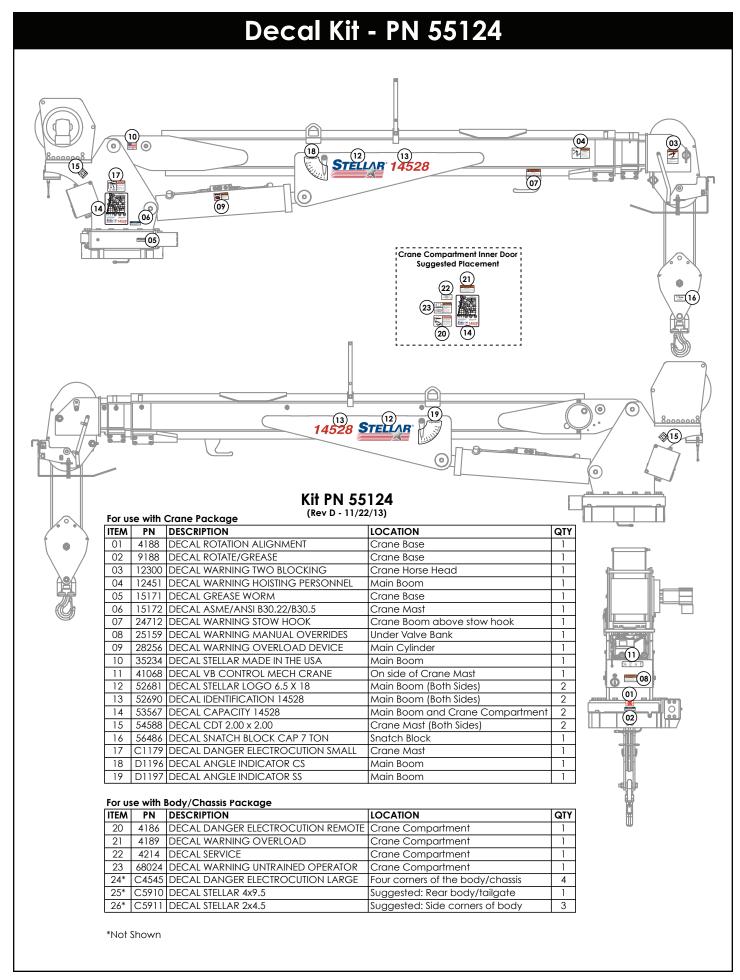

Max Horizontal Reach

- 6. Record this number in the data box for Zone 1. This is the revised capacity due to stability for this zone.
- 7. Repeat this procedure for each zone until the worksheet is completed.
- 8. This is the revised capacity based on stability of this package.

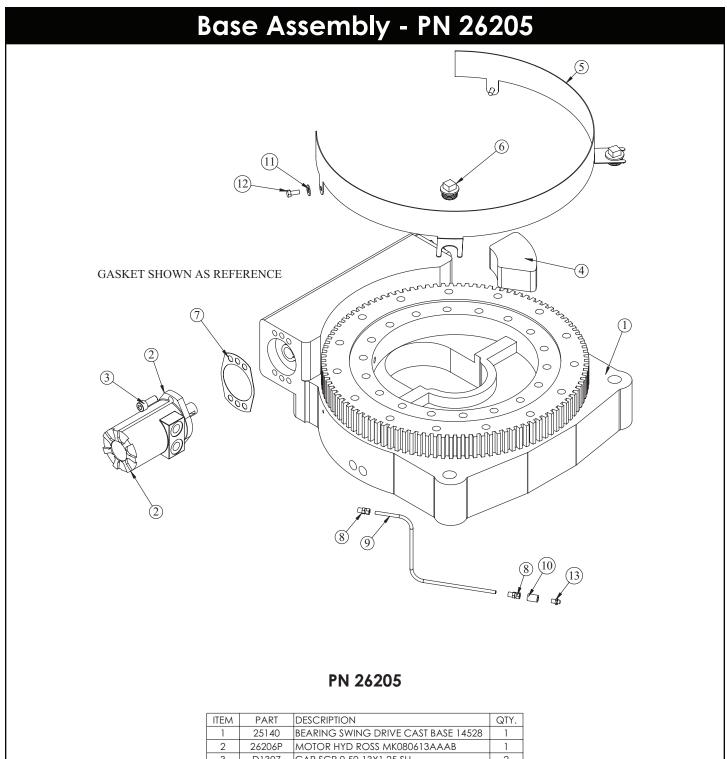

Crane Load Level Indicator

Stellar® Cranes are shipped with a load level indicator that is used to determine if the truck is level (side to side) before using the crane to pick/move a load. This level should be installed in the isolated crane compartment of the body. If level indicator is missing or damaged, please contact Stellar Customer Support for a replacement.
